Enterprise Information Technology Data Repository (USAF)

Authority to operate (ATO)

What is EITDR?

The EITDR is a database controlled and managed by AFCA/EV. It includes information on most UNCLASS USAF IT systems. The DIACAP (along with many other documents – such as the Information Support Plan) is essentially uploaded into the EITDR. The Air Force has a process known as the Security, Interoperability, Supportability, Sustainability and Usability (SISSU) that is worked in tandem with the DIACAP process for achievement of the an ATO/ATC.

Authority to operate (ATO) and Authority to Connect (ATC)

What does EITDR mean to US Air Force?

Our Consolidated Telephone Operators (CTO) is listed in the Air Force EITDR database and we have an Authority to Operate (ATO) and Authority to Connect (ATC). To our USAF military customers, it means our Attendant Consoles and TM-2000 ACD meet ALL the Air Force's Interoperability and Information Assurance testing requirements and all the processes listed in the previous paragraph.
